EXPERIENCE

Wide professional experience was accumulated in the years by the design work for many chemical, petrochemical, refining, gas & oil projects.

All aspects of process design have been experienced including, process flow diagrams, piping and instrument diagrams, equipment data sheets, instrument process data sheets, line list with process data, preparation of operating manuals.
A particular field of developed capability is the coordination of plants start up and all preparatory phases for it. Hence, in the office work, P&ID's are reviewed and adjusted with every operational detail, operating manuals prepared either in a simplified way or in detail according to requirements.
